Winter 2019 DA 410 Multivariate Analysis Charlene Cheng

Take Home Final Exam March 2019

Name (Print):	
I acknowledge and ac	cept the Honor Code
Signature:	
Score:	/100

Instructions:

Please complete this exam in a Word document, and save it as **DA410_Final_XXXXX**, where XXXXX is the first five letters of your last name. Make sure you put down the problem # clearly.

This exam is Open Book, Open Notes, No Discussions, No Questions Answered by Instructor.

- ?
- Exam must be submitted through Assignment Tool by 11:59pm of Sunday, 3/17/19 (Pacific Time). NO late final will be accepted.
- Round to the THIRD decimal place, unless otherwise noted in the instruction.
- PLEASE SHOW ALL YOUR WORK COMPLETELY AND CLEARLY!!! Without sufficient work shown will result at least 50% penalty of the total available credit of the question.
- You may use R, make sure to include the commands and outputs, as well as the interpretations of the outputs.

© Good Luck ©

You may use R and built-in functions. Make sure to include the commands and outputs, as well as the interpretations of the outputs.

Problem 1:

Suppose our multivariate date have covariance matrix $s = \begin{pmatrix} 5 & 0 & 0 \\ 0 & 9 & 0 \\ 0 & 0 & 8 \end{pmatrix}$

- (a) Find the eigenvalues and eigenvectors of S.
- (b) Show the percent of variance explained.
- (c) Decide how many components to retain.

Show your reason completely and clearly, including all necessary commands and outputs, as well as interpretations/conclusions.

Problem 2:

The correlation matrix given below arises from the scores of 220 boys in six school subjects: (1) French, (2) English, (3) history, (4) arithmetic, (5) algebra, and (6) geometry. Obtain principal component loadings for three factors.

$$\mathbf{R} = \begin{array}{c} \text{French} \\ \text{English} \\ \text{History} \\ \text{Arithmetic} \\ \text{Algebra} \\ \text{Geometry} \end{array} \begin{pmatrix} 1.00 \\ 0.44 & 1.00 \\ 0.41 & 0.35 & 1.00 \\ 0.29 & 0.35 & 0.16 & 1.00 \\ 0.33 & 0.32 & 0.19 & 0.59 & 1.00 \\ 0.25 & 0.33 & 0.18 & 0.47 & 0.46 & 1.00 \end{pmatrix}$$

Show your work completely and clearly, including all necessary commands and outputs, as well as interpretations/conclusions.

Problem 3:

For the Foodstuff Contents data set below, column names are "Food Energy Protein Fat Calcium Iron" .

- (a) Discuss your choice of the number of factors.
- (b) Obtain principal component loadings.

V1

(c) Calculate percent of variance explained for each factor, plot the factor scores using appropriate plot(s), and decide how many components to retain.

Show your work completely and clearly, including all necessary commands and outputs, as well as interpretations/conclusions.

Problem 4:

The data below measures in five variables in comparison of normal patients and diabetics:

x₁: glucose intolerance

x₂: insulin response to oral glucose

x₃: insulin resistance y₁: relative weight

y₂: fasting plasma glucose

- (a) Find the canonical correlation between (y_1, y_2) and (x_1, x_2, x_3) .
- (b) Test the significance of each canonical correlation.

Show your work completely and clearly, including all necessary commands and outputs, as well as interpretations/conclusions.

Problem 5:

The data consists of mental ability test scores of seventh- and eighth-grade children from two different schools (Pasteur and Grant-White). In our version of the dataset, only 9 out of the original 26 tests are included. A CFA model that is often proposed for these 9 variables consists of three latent variables (or factors), each with three indicators:

- a visual factor measured by 2 variables: x1 and x2
- a textual factor measured by 4 variables: x3, x4, x5 and x6
- a speed factor measured by 3 variables: x7, x8 and x9
- a visual factor and a textual factor have zero correlation
- (a) Please draw a figure contains a graphical representation of the three-factor model.
- (b) Please write out the corresponding syntax for specifying this model.

Example as below

```
HS.model <- ' visual =~ x1 + x2 + x3
textual =~ x4 + x5 + x6
speed =~ x7 + x8 + x9 '
```

Problem 6:

Make a conclusion for this class DA 410, make sure you include the following aspects:

- (a) How many models you have learnt, use 3 to 5 sentences to explain each of them.
- (b) Which one really impressed you when you learnt and why
- (c) Which one is your favorite one and why
- (d) Select two models out, make a comparison. Show the differences and similarities between them.
- (e) If you will build up a project to solve some real problem using one of them, which one you would like to you, and what kind of project you will like to build. (200 words)

The End

Take Home Final Exam March 2019
